

Dear Hiring Team at Artefact LatAm,

I am writing to express my strong interest in the Data Engineer position. As a Data Engineer with over 15 years of experience in leadership and operations, combined with a robust technical background in Data Science and AI, I am confident in my ability to build scalable pipelines and contribute to Artefact's culture of innovation and empathy.

In my recent projects, I have focused on designing efficient ETL/ELT architectures and automating complex workflows. Specifically, I developed an automated **CNPJ Data Pipeline** that eliminated 4 hours of daily manual work, ensuring data quality and structural integrity through PostgreSQL. My experience with **Apache Airflow** principles is backed by my proficiency in Python and orchestration tools like n8n and Zapier, where I've built systems such as a **Corporate RAG Chatbot** and an **AI-powered Job Scraping pipeline**.

What sets me apart for Artefact is the combination of:

- **Technical Execution & Business Vision:** I don't just build pipelines; I understand the "why" behind the data. My background in management allows me to bridge the gap between engineering and stakeholder requirements.
- **Fluent English & Global Mindset:** Having structured U.S. operations for Fachini Machinery, I am fully comfortable collaborating in international, fast-paced environments.
- **Commitment to Inclusion:** I deeply value Artefact's focus on diversity. As a professional who prioritizes social justice and human-centric leadership, I thrive in environments where all voices are respected.

I am currently finishing a Post-graduate degree in AI and Machine Learning, which further strengthens my ability to integrate ML models into reliable data delivery flows.

Thank you for your time and consideration. I am eager to discuss how my technical skills in Python, SQL, and automation can help Artefact continue to lead the future of marketing.

Best regards,

Diego Santos [santos.diegoj86@gmail.com] [+55 45 99929-8275]
